## PDA

The restaurant will be equipped with PDAs with recipe menu and entertainment softwares.it can be implemented in two ways

### Model1 offers the following features:

- **Order food:** the customer can view the menu in their PDA and place their orders using the same.
  - ❖ **Menu:** view the menu, its ingredients, time of delivery, cash etc.
  - ❖ **Payments:** have options either to pay by cash or using your credit card.

- ❖ **Token:** will receive a token which is useful to know the delivery of your order.
- ❖ **Demo:** can view the demo of how the delicacies are prepared.
- ❖ **Cart :**you got a cart from initial window you can put orders into it
- **Entertainment:** there will be a predefined library from which the guests can watch videos, songs, photos, games etc. and also they can transfer them to their mobile or laptop using Bluetooth connection.
- **Browsing:** you can navigate through internet .the restaurants are Wi-Fi enabled. You can browse with the PDA.
- **Comments:** if u need to comment about anything like food, drinks, service or anything u can comment as voice, video or text format.
- **Room service:** if you need to know about rooms facilities PDA help to see rooms, categories, services and other features .expect this they provide PDA for every rooms that helps for food ordering, browsing and also other activities.
- **Advertisement: the** hotel can put advertisement through the pda.it may be push ads or Normal ads.

## Mode2 offers the following features:

- **Standard:** it increases the standard of restaurant.
- **Easy tool:** the waiter can easily respond to the Queries from customers regarding the Dishes, time for Preparation and ingredients. It also tells about availability of rooms.
- **Saves time:** waiter can handle more customers as he can easily report the order from PDA device one after other

## TOUCH SCREEN

- **Order food:** the customer can view the menu in their TOUCH SCREEN and place their orders using the same.
  - ❖ **Menu:** view the menu, its Ingredients, time of delivery, cash Etc.
  - ❖ **Payments:** have options either to pay by cash or using your credit card.
  - ❖ **Token:** will receive a token which is useful to know the delivery of your order.
  - ❖ **Demo:** can view the demo of how the delicacies are prepared.
  - ❖ **Cart: you** got a cart from initial window you can put orders into it.

- **Entertainment:** there will be a predefined library from which the guests can watch Videos, songs, photos, games etc. and also they can transfer them to their mobile or laptop using Bluetooth connection.

- **Comments:** if u need to comment about anything like food, drinks, service or anything u can comment as voice, video or text format.

- **Room service:** if you need to know about rooms facilities TOUCH SCREEN help to see rooms, categories ,services and other features . TOUCH SCREEN will be made available for each and every room. That will help for food ordering, browsing and also other entertainments.

**Advertisement:** the hotel can put advertisement through the TOUCH SCREEN. When the system in ideal states it show the ads.

## MOBILE

- **Reservation:** the room reservation and food reservations are done through the mobile sms .if the customers sms/call got into the system then the system give a replay message or acknowledgement that it receive the call or sms the next step customer care executive enables a call .
- **Complaints:** complaints and suggestion receive as call Or sms to a common number like (5800)

## WEB PORTAL

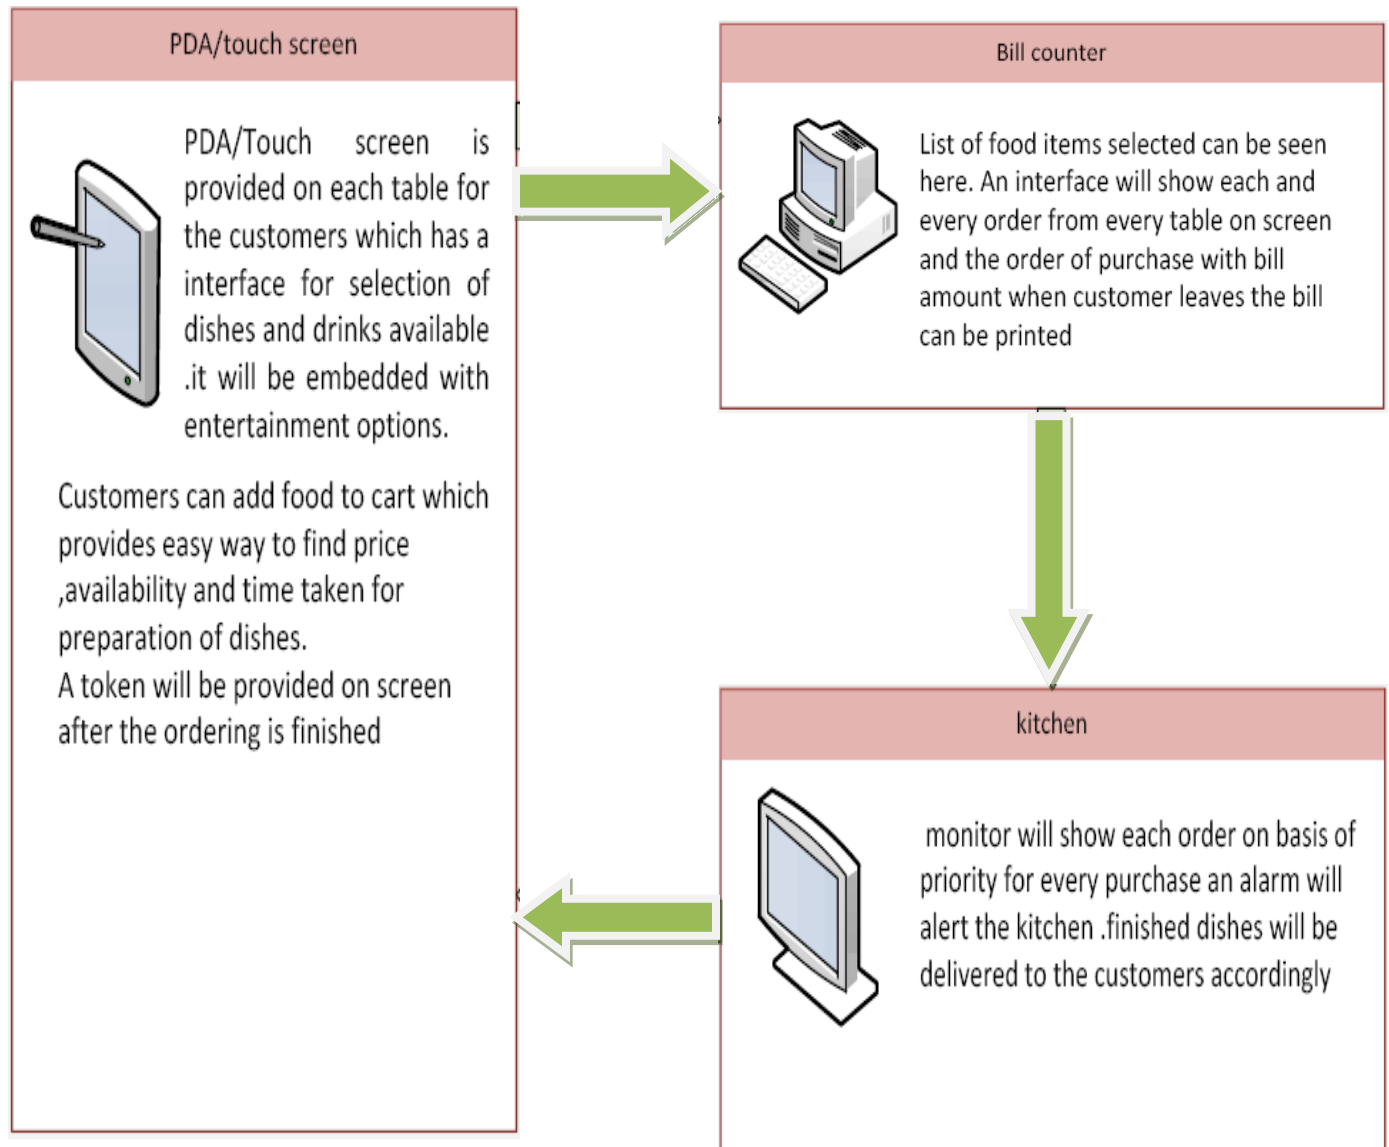

A web portal with high end application is developed it is used both for marketing and application oriented.

- **Web:** through web we can know about facilities of the hotel its rooms and restaurant facilities. We can book rooms, tables, and parcel through the web portal. Various payment mode will be also made available.
